

North South University

Bike Store Management System

Course: CSE299 – Junior Design

Section:12 Group: 05

Team Members

1. Md. Munam Rahman 2222824042

Supervisor: Ms. Syeda Sarita Hassan [SSH1]

Weekly Update: 05

Reporting Period: 08.04.2026 –15.04.2026

1. Introduction

This week, we focused on building the admin management system for our site. Key features like secure login/logout, product control, sales tracking, and a sidebar for easy navigation were added to manage the backend smoothly.

2. Work Completed

A. Admin Login

We created a login system where only the admin can sign in. Once logged in, the admin is taken to the admin dashboard. It uses sessions to keep track of who is logged in.

B. Product Update, and Delete

Through updelete.php, admins can:

- Update product details in the database
- Delete products

C. Admin Dashboard

The dashboard shows useful stats like:

- How many products were booked
- How much money came from bookings
- How many products were sold
- How much money was earned from sales

The admin can also filter the stats by overall, last week, last month, or last year.

D. Sidebar Menu

We added a sidebar on all admin pages. It has links to:

- Add and manage products
- View sold/booked items
- See customer info
- Log out

E. Logout System

We made a logout page that ends the session and sends the admin back to the homepage. This keeps the system secure.

F. ML integration

We have also started researching the integration of a machine learning-based recommendation system. This system will suggest bikes to customers based on their preferences and behavior.

3. Conclusion

This week, we finished building the main admin features. The admin can now log in, manage the products, check sales and booking stats, and move around the system easily.
